

natural mineral spa treatment

Non-toxic is good for you - Non-toxic is good for the planet - And non-toxic works in your hot tub

Introducing the first completely non-toxic hot tub maintenance system.

ahhNatural™ is made up of a proprietary combination of minerals, vitamin C, and Ancient Sea Salt that naturally control bacteria and keep water clear for up to one year. Simply place the 16" x 16" mesh bag at the bottom of your tub and transform your spa back into what nature intended.

ahhNatural™ is the only hot tub maintenance system on the market that never requires a traditional chemical shock. Perfected after 10 years of research & development, it is based on the same advanced technology commonly used in commercial water purification.

Who is ahhNatural™ right for?

One ahhNatural mineral bag is ideal for low to moderate use (2-3 bathers, 5 times per week) in residential wooden, vinyl or hard-shell hot tubs holding 400 gallons of water (6-person tub) with circulation. Our system works harmoniously with a silver ionizer or in hot tubs up to 500 gallons equipped with an Ozonator.

The ahhNatural™ impact.

On you: Now ahhNatural™ hot tub users can spend countless, worry-free hours in soothing, toxic-free water. And no more need to shower off the 'ick' afterwards.

On the community: Hot tubs traditionally generate as much as 1,600 gallons of contaminated water a year. Now, ahhNatural™ hot tub water is a mindful reusable resource.

On the planet: If all 6.2+ million hot tubs in the United States contained naturally pure mineral water, we'd prevent more than 10 billion gallons of toxic wastewater from entering the ecosystem each year.
